

OPU -

Oil Pumping Unit series

CUSTOMISED OIL PUMPING STATIONS

Redragon designs, builds, and commissions custom oil pumping solutions for existing facilities and integrated oil management systems.

OPU pump units can operate as standalone systems or be integrated with PLC and SCADA networks for remote control. Standard units feature reliable self-sealing or quick-disconnect couplings in gunmetal, brass, or stainless steel.

Pipework is manufactured from carbon steel or stainless steel, with all welding performed by certified professionals. Manifolds are pressure-tested to national standards, and integrated tanks are built to ASME specifications.

Typical specification

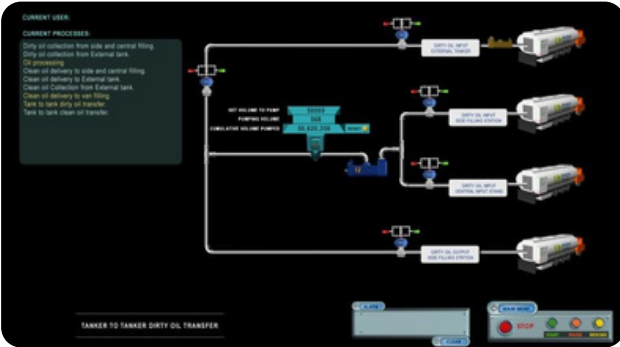

- Integrated oil drip pan
- Flow rates to 50,000 litres per hour

- Elevated base for ease of movement
- Choice of wetted materials
- Aluminum frames for weight reduction
- Custom SCADA/PLC
- Leakage alarms
- Local control panel requires only power and optional Ethernet/Devicenet connections

The OPU is available as a skid-mounted unit, handcart with VFD control, or trailer-mounted system with onboard oil storage.
